

## Security Solutions

Just like every company is different, every network is different. We create solutions that meet your unique needs, simplify your life and reduce total cost of ownership. Small to mid-sized companies have the same critical network security needs as large enterprises, but generally have limited resources with which to buy, install, manage and maintain security solutions. To tackle these resource challenges, you need a solution that is designed to meet your security requirements today and grow with you as your business needs change. We'll design, develop and implement your own personal technological vault, securing the data that is the foundation of your business and minimizing potential areas of compromise. Using a combination of the strategies below, let us help you secure your network so you can get on with your business.

### Secure Network Design and Penetration Testing

A secure network starts with carefully planned out design. Our engineering staff collaborates with you to understand the security needs of your employees, your customers and your business as a whole. Strong security design creates a fortified wall behind which you can comfortably achieve your business goals. We also believe that every network needs to be challenged. Our robust Penetration Testing program is designed to swiftly identify areas of concern so that security risks can be quickly addressed.

### Software Solutions

We believe that every network asset needs to be protected from potential threat to your business. TrendMicro offers superior protection, responsible and easy to use alerting and straightforward updates. We recommend TrendMicro and we use it to protect our own assets.

### Hardware Solutions

WatchGuard firewall solutions reflect our attention to the needs of enterprises of all sizes and our drive to develop technology that meets those needs. WatchGuard offers integrated security solutions that give you layered protection and intuitive management, backed by expert guidance and support.
